PROFESSIONAL SUMMARY

Motivated and detail-oriented Computer Science undergraduate with a strong foundation in **Java**, **SQL**, and **Object-Oriented Programming (OOP)** concepts including encapsulation, inheritance, polymorphism, and abstraction. Passionate about building scalable, efficient software solutions and writing clean, maintainable code. Experienced in developing full-stack projects and actively pursuing continuous growth through internship simulations and hands-on development in real-world scenarios.

EDUCATION

Bachelor of Technology in Computer Science and Engineering Duration: 2023 – 2027
Anna University (or affiliated institution)

SKILLS

Technical Skills: Java, C, React, HTML/CSS

Frameworks: Spring Boot, Hibernate, Maven, JUnit

Tools: Git, IntelliJ IDEA, VS Code

Soft Skills: Optimal Problem-Solving Approach, Teamwork, Communication

INTERNSHIPS

JP Morgan – Software Development Job Simulation

- Gained hands-on experience with financial software workflows, designing and implementing a data feed interface using Python and Perspective to visualize real-time stock price data for traders.
- Enhanced understanding of software engineering best practices in a corporate setting, including version control, debugging, and writing test-ready code aligned with JP Morgan's technical standards.

Skyscanner – Frontend Development Job Simulation

- Developed a responsive travel search UI component using React and Backpack design system, gaining practical experience in building accessible, mobile-first frontend features used in production at scale.
- Improved proficiency in component-driven architecture and modern frontend tooling, including writing unit tests and collaborating with design guidelines to deliver pixel-perfect UI implementations.

PROJECTS

Echo – AI-Powered Technical Interview Platform | Tech Stack: Next.js, React, PostgreSQL (Supabase), Groq (Llama 3), Google MediaPipe

- Architected a full-stack AI interview platform using Llama 3 for dynamic technical assessments and automated scoring, enabling personalized candidate evaluation at scale.
- Engineered client-side machine learning via WebAssembly to enforce enterprise-grade anti-cheat monitoring in real-time, ensuring assessment integrity through pose and gaze detection.

SmartBudget – Personal Finance Tracker | Tech Stack: React, Java Spring Boot, PostgreSQL, Chart.js

- Built a full-stack expense tracking application with user authentication, category-wise budget allocation, and interactive charts to visualize monthly spending patterns and savings goals.
- Implemented RESTful APIs using Spring Boot with JWT-based security, integrating PostgreSQL for persistent data storage and enabling export of financial reports in CSV format.

CodeCollab – Real-Time Collaborative Code Editor | Tech Stack: React, Node.js, WebSockets, Monaco Editor

- Developed a browser-based collaborative coding environment supporting real-time multi-user editing with conflict resolution using Operational Transformation (OT) algorithm.
- Integrated syntax highlighting for 10+ languages via Monaco Editor and WebSocket-based live session sharing, enabling seamless remote pair programming experiences.
